LETTER OF TRANSMITTAL

WAR DEPARTMENT,
ARMY MEDICAL LIBRARY,
June 30, 1941.

Major General JAMES C. MAGEE,
The Surgeon General, United States Army.

GENERAL:

I have the honor to report the completion of the Sixth Volume of the Fourth Series of the Index-Catalogue of the Library of the Surgeon General's Office, the fifty-third volume of the entire series. The volume contains references to medical subjects classified under headings from Gadfly to Gyromonas, and the books of authors whose names begin with G.

In addition to the regular text of the catalogue, this volume also contains a few pages of continuation of the list of abbreviations used in the references. It also includes the First Fasciculus of the Bio-Bibliography of Sixteenth Century Medical Authors prepared by Dr. Claudius F. Mayer, editor of the Index-Catalogue. The first fasciculus of this supplemental bibliography refers to authors whose names begin with A. The scope of the bio-bibliographical supplement, and the method of its preparation is explained in the Introduction of the fasciculus.

Owing to the disturbed state of international scientific life, the publication of a supplemental List of Congresses has been withheld for the present, but information on the new congresses and additional data on those already listed will be published in the seventh volume of the Index-Catalogue.

The Sixth Volume thus forms 876 pages. The following table shows the number of titles in the Index-Catalogue, as far as published:

	Author titles	Subject titles	
		Books	Journal articles
First Series (16 volumes) 1880-95.....	176,364	168,537	511,112
Second Series (21 volumes) 1896-1916	169,812	136,405	645,557
Third Series (10 volumes) 1918-32.....	88,876	57,034	603,600
Fourth Series, 1936- :			
Volume One.....	2,779	4,454	71,168
Volume Two.....	8,892	3,631	79,874
Volume Three.....	4,281	4,302	77,479
Volume Four.....	3,798	4,375	55,950
Volume Five.....	5,499	5,630	88,048
Volume Six.....	5,836	3,125	58,871
Total to date.....	460,137	387,493	2,191,659

The Library now contains 419,451 volumes and 612,559 pamphlets of all sorts, including letters, broadsides and medical theses. During the last year 5,726 works have been purchased or received as gifts, including a collection of 63 Arabic manuscripts. The entire library of the late Dr. S. Adolphus Knopf containing many important publications and other items on tuberculosis was received as a bequest. The Library also acquired more than 200 portraits of medical men, thus increasing its portrait collection to more than 10,000 items. The collection of medical journals was enlarged by 168 periodicals not represented previously in the Library. A large number of photostatic reproductions of extremely rare 16th-century English medical publications has been secured from the Huntington Library.

Outstanding acquisition of the past fiscal year was the purchase of the Arabic manuscripts from a scholar who spent more than forty years collecting them. Some of the manuscripts are unique, and many were copied before the European discovery of the art of printing. The copy of the 5th and 6th book of the al-Háwí of Rází (Rhazes) is dated 1094 A. D.

The Library has begun the unionization of its card catalogues by listing the holdings of other medical libraries in the United States. This project has not advanced very far as yet, but the card catalogues of several libraries have been microfilmed. The establishment of a Union Catalogue of Medical Works required a partial re-cataloging of the holdings of this Library in accordance with modern library methods. The result of this re-cataloging will be seen in the future volumes of the Index-Catalogue.

Very respectfully,

HAROLD W. JONES,
Colonel, Medical Corps, United States Army,
The Librarian, Army Medical Library.

FOURTH ADDITION TO THE LIST OF ABBREVIATIONS FOR SERIAL PUBLICATIONS

Published in the Second Volume, Fourth Series, of the Index-Catalogue

For explanations, see List of Abbreviations, 4. ser., v.2
